SUMMARY

Senior .NET developer with 17 years designing, building, and supporting production applications in C#, ASP.NET MVC, ASP.NET Core Web API, and SQL Server. Lead developer on the federal Direct Express debit card platform, which processes over \$3 billion in monthly payment transactions for millions of beneficiaries. Builds RESTful APIs and service-based backends on Azure with Angular, TypeScript, and JavaScript front ends, and has shipped in Agile teams for both federal and enterprise organizations.

TECHNICAL SKILLS

Languages and Frameworks: C# 12, .NET Core 8+, ASP.NET Core Web API, ASP.NET MVC, Entity Framework Core, TypeScript, JavaScript (ES6+), HTML5, CSS3, T-SQL

APIs and Architecture: RESTful API design, microservices, service decomposition, clean architecture, SOLID, dependency injection, repository pattern, CQRS, MediatR, MassTransit

Databases: SQL Server, Azure SQL, PostgreSQL, Cosmos DB, stored procedures, indexing, query performance tuning, schema design

Front End: Angular, NgRx with Signals, React, Next.js, Blazor, responsive design, WCAG 2.1 and Section 508 accessibility

Azure and DevOps: App Services, Container Apps, Functions, API Management, Key Vault, Application Insights, Service Bus, Bicep IaC, Azure DevOps, GitHub Actions, Docker, OpenTelemetry

Practices: Agile and Scrum, test driven development, xUnit, code review, secure coding, OAuth2 and OpenID Connect, Microsoft Entra ID, production support

PROFESSIONAL EXPERIENCE

Senior Systems Developer

Corgan | Dallas, TX (Remote) | May 2025 to Present

- Design and maintain RESTful Web APIs in .NET Core 8+ for a multi-consumer enterprise environment, using versioned endpoint contracts, clean architecture layering, and dependency injection so downstream teams integrate without breaking changes.
- Deliver front-end applications in Angular, React, and TypeScript that give 1,200+ employees across 22 global offices self-service access to reporting and analytics that previously required a manual request.
- Serve as lead architect of the firm's internal AI platform, built on an orchestrator and specialized worker-agent architecture with enterprise document retrieval, intent-based model routing, and Microsoft Entra ID single sign-on and role-based access control.
- Provision the production Azure footprint with Bicep infrastructure as code, including Container Apps hosting containerized microservices, Cosmos DB, Key Vault, and Application Insights, and instrument services with OpenTelemetry so failures are traced to a specific request rather than reproduced by hand.
- Cut release risk by moving deployments onto GitHub Actions pipelines with branch protection, automated unit and end-to-end test gates, and required code review before merge.
- Lead weekly code and design reviews and mentor engineers on SOLID principles, database programming, and query optimization while running two-week sprints with daily stand-ups and retrospectives.

Senior IT Specialist (Software Engineer), GS-2210-13

Social Security Administration | Dallas, TX | July 2012 to May 2025

- Served as lead developer on the Direct Express federal debit card platform, a C#, ASP.NET, and SQL Server system processing over \$3 billion in monthly benefit payments across Treasury and the issuing bank.
- Standardized enterprise integration by designing and building the Developer Resource API, a reusable RESTful Web API in C# and ASP.NET Core that replaced repeated point-to-point data access with a single documented, versioned service consumed across multiple agency applications.
- Built EPICS, an enterprise complaint and case tracking application in ASP.NET MVC and SQL Server, giving congressional staff and agency leadership direct visibility into case status and resolution timelines.
- Eliminated manual balance research and case-by-case letter drafting by building an automated correspondence system that selects policy-approved verbiage based on account state and balance status, then generates letterhead notices for cardholders with current or prior bank balances.
- Tuned SQL Server performance for high-volume payment and case workloads through stored procedure rewrites, index strategy, and execution plan analysis, and owned schema design and data integrity for the systems above.

- Delivered under NIST 800-53, FISMA, Privacy Act, and Section 508 requirements, and carried production support duty for systems that could not go dark, troubleshooting and debugging live payment and case defects and coordinating Continuity of Operations with regional offices.
- Mentored developers in C# and .NET practices, ran code reviews, and worked through Agile ceremonies with analysts, testers, and program stakeholders to turn policy requirements into shippable specifications.

Junior Software Developer, GS-2210-12

Social Security Administration | Falls Church, VA | September 2008 to July 2012

- Built full-stack features in C#, ASP.NET MVC, and SQL Server for agency business applications, covering data access, business logic, and server-rendered UI.
- Wrote and optimized T-SQL stored procedures and views supporting reporting and batch processing, and applied object oriented design patterns to replace duplicated procedural code.

Disbursing Specialist (Accountant) / Administrative Specialist

United States Marine Corps | Camp Lejeune, NC | July 2000 to 2008

- Progressed from Administrative Specialist (MOS 0121) to Disburser and Accountant (MOS 3432), processing pay and travel reimbursements for personnel at every level of the command under audit and regulatory controls. Honorable discharge.

PORTFOLIO

Public repositories covering C# and .NET Core service work, TypeScript and Angular front ends, and Azure deployment tooling:

EDUCATION & CERTIFICATIONS

Bachelor of Science in Computer Information Systems, Saint Leo University (2011)

Microsoft

- [Microsoft Certified: Azure AI Cloud Developer Associate](#) (2026)
- [Microsoft Certified: Azure AI Apps and Agents Developer Associate](#) (2026)
- [Applied Skills: Accelerate app development by using GitHub Copilot](#)
- [Applied Skills: Build a natural language processing solution with Azure AI Language](#)

AWS

- [AWS Certified Developer - Associate](#)

Anthropic - AI & Agentic Engineering

- [Claude Certified Architect - Foundations](#) (proctored certification, 2026)
